

Q1 — XLOOKUP

You are given an Order_ID = 1011.

Find:

Salesperson
Product
Sales
Profit

Q2 — XLOOKUP

You are given a Product Name:

Example

Product	Category	Profit
Laptop	Electronics	15000
Mouse	Electronics	5000
Keyboard	Electronics	7000
Monitor	Electronics	12000
Headset	Electronics	8000

Use XLOOKUP to find Category and Profit.

Q3 — XLOOKUP with error handling

Create a cell where the user can enter an Order_ID.

If the Order_ID exists, return the Salesperson, Product, Sales, and Profit.

For example:

Order_ID	Salesperson	Product	Sales	Profit
1001	John Doe	Laptop	15000	15000

Q4 — INDEX + MATCH

Using the Order_ID, find the Profit for Order 1008.

Do not use VLOOKUP/XLOOKUP.
Use: INDEX + MATCH

Q5 — INDEX + MATCH with two lookups

Find the Sales for:
Salesperson = Priya
Product = Laptop

You need to use INDEX + MATCH.

Q6 — Interview Question

Suppose your company has a large table with 50,000 rows.

The interviewer asks: "Why might you choose INDEX + MATCH instead of VLOOKUP?"

Explain the answer in your own words.

Q7 — SUMIFS

Calculate the total Sales for the North region.

Expected formula should use: SUMIFS

Q8 — Multiple conditions

Calculate total Sales where:
Region = North
Customer_Type = Corporate

Use SUMIFS.

Q9 — Three conditions

Calculate total Sales where:
Region = West
Category = Accessories
Customer_Type = Retail

Use SUMIFS.

Q10 — Interview-style SUMIFS

The manager asks: "How much profit did Ravi generate from Electronics products?"

Find the answer using SUMIFS.

Part 4 — Nested IF

Create a new column:

Performance

Use these rules:

Profit	Performance
>= 15,000	Excellent
>= 10,000	Good
>= 5,000	Average
< 5,000	Low

Q11 - Create the formula using Nested IF.

For example:

Profit = 14,000 → Good
Profit = 21,000 → Excellent
Profit = 3,000 → Low

Q12

Create a new column:
Salesperson

Use these rules:

Sales	Level
>= 150,000	Very High
>= 100,000	High
>= 50,000	Average
< 50,000	Low

Below this using IF, AND, OR, and Nested IF.

Q13 — Interview question

What is the difference between:

Nested IF and IFS

And when would you prefer IFS?
Explain in simple words.

Q14

Create a Pivot Table showing:

Region → Total Sales

You should get something like:

Region	Total Sales
East	1
North	2
South	1
West	1
Grand Total	5

Q15

Create a Pivot Table showing:

Salesperson → Total Sales → Total Profit

Example structure:

Salesperson	Total Sales	Total Profit
Amy	1	1
Ravi	2	2
John	1	1
Priya	1	1

Q16 — More realistic analysis questions

Create a Pivot Table showing:

Region → Category

with:

Region	Accessories	Electronics	Grand Total
East	1	1	2
North	1	1	2
South	1	1	2
West	1	1	2
Grand Total	4	4	8

Q17

Take your Pivot Table from Q15.

Add a filter for:

Region

Now click:

• North

• South

• East

• West

Observe how the Pivot Table changes.

Next add another filter for:

Customer_Type

Now you should be able to filter the Pivot interactively.

Q18 — Interview-style dashboard task

Your manager says:

"Create a simple sales analysis dashboard."

Using your dataset, create:

1. Pivot Table

• Sales by Region

2. Pivot Table

• Sales by Salesperson

3. Pivot Table

• Sales by Category

4. Slicers

• Region

• Customer Type

5. One suitable chart

• Column or Bar chart

Your goal is to make the dashboard interactive using the slicers.

Final Interview Challenge

Don't use the questions above for this step.

Imagine you're working as a Junior Data Analyst.

Your manager gives you the Sales Data table and asks:

"Find the total sales generated by Corporate customers in the Electronics category in the North and West regions."

First, you need to decide yourself whether to use:

• SUMIFS

• Pivot Table

• or another Pivot technique.

Then the manager asks:

"For each salesperson, classify their performance based on total profit."

Use:

• Pivot Table

• and either IFS or Nested IF

Finally:

"Create an interactive report where I can select a Region and Customer Type and see the corresponding sales."

Use:

- Pivot Table
- Slicer
- Chart

This last challenge is much closer to what you'll actually do in an entry-level Data Analyst position.
